Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This is the second office action for U.S. Application 10/567,145 for a Powertrain Mount.

Election/Restrictions

Applicant's election without traverse of Species 1 in the reply filed on April 14, 2009 is acknowledged. Claims 3-5 and 16 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 14, 2009.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 7, 10-15, 17, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 3,565,373 to Frye. Frye discloses a vibration isolator mount with a bracket member that includes a base portion that has a pair of side wing portions (38) extending from a pair of bends in the base portion and at least one pair of end wing portions (42) extending from opposite ends of the base portion. There is a core element (14) with a body portion disposed between the pair of side wing portions and a mounting

portion (56) attached to the body portion. There is an elastomeric spring member (62) disposed between the body portion of the core element and the pair of side wing portions of the bracket member, the wing portions being bent toward the elastomeric spring member (relative to the base portion) so as to oppose opposite ends of the spring member (on each side). The end wing portions extend from opposite sides of the base portion and there is a travel restrictor member (60) extending between the end wing portions and positioned to restrict travel of the core member relative to the base portion. The bracket is formed from a unitary plate and the bracket includes at least one mounting aperture (28) adapted for mounting the bracket to a support structure and the mounting portion of the core element includes an aperture (58) for mounting the bracket member to a support structure. The pair of bends in the base portion of the bracket member each include strengthening ribs (see fig. 6).

Allowable Subject Matter

Claims 6, 8, 9, 18, and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
